LPTMM-2022

Call for Abstracts

Challenges in LPTMM: THE NEXT TEN YEARS

This edition of the LPTMM conference series will be held online, in June 21-24, 2022. Short (max. 1 page) abstracts should be sent till February 1, 2022 as an email attachment to martin.aube@cegepsherbrooke.qc.ca and cc to kocifaj@savba.sk, using the template available at the conference website.

Topics include:

- A - Theoretical concepts of modelling light pollution
- B - Numerical tools and simulation experiments
- C - Effects of atmospheric aerosols, clouds, terrain, and obstacles on light pollution
- D - Impact of spectral and angular characteristics of light sources and reflecting surfaces
- E - Observational techniques, instrumentation, data, and products
- F - Design and evaluation of dark sky friendly lighting technologies, regulations and outreach

LPTMM-2022

Call for Research Campaigns

Do you have a research campaign idea you may want to share?

Send an email describing it to martin.aube@cegepsherbrooke.qc.ca and cc to kocifaj@savba.sk before February 1, 2022.

Several in-person collaborative research campaigns will be scheduled for the days following the conference in Galicia and North Portugal, as well as in other places of the World, after selection of the more promising and interesting proposals by the Scientific Committee.

Registration for these events is expected to be open in mid March 2022. Participants shall organize, book, and cover their travel and accommodation expenses by their own means and at their own risk, although useful support information will be provided by the Organizing Committee. Travel and accommodation packs offered by local travel agencies will be announced after the campaigns are selected by the Scientific Committee.
